HAM STICKS® FOR HF MOBILE OPERATION

When these mobile HF antennas were first introduced by WD4BUM, they created quite a stir in the amateur antenna industry because of their unique low profile design and outstanding performance. Since that time they have been copied and imitated by other manufacturers but none have improved upon the original HAM STICK® design!

These two-piece MONOBAND ANTENNAS consist of a hollow fiberglass base section approximately 1/2" diameter with the loading coil wound directly on the fiberglass and covered with PVC shrink tubing. The black oxide brass base fitting has 3/8" x 24 male threads that fit most amateur mobile mounts.

The top section is a tapered, 17-7 PH tempered Stainless Steel whip that telescopes into the base section for frequency adjustment. It is secured by two set screws.

The assembled, adjusted antenna will be approximately 7' long. High mounting on the vehicle is desirable and not a problem as the antenna is VERY resilient and will withstand abuse that would destroy conventional metal antennas. No spring or guy wiring is required.

$12.95

2 1/2" dia. x 2 1/4" high. Pictured is the base and mount for a Ham Stick® with the INDUCTI-MATCH installed.

Finally an inexpensive, easy way to MATCH HF antennas (80M-15M). Far easier to use and ½ the cost of the present capacitance match boxes available. The INDUCTI-MATCH also mounts at the feed point of the antenna which is the proper place for matching, and does not have to be in a weather protected environment.

Complete installation instructions and all hardware necessary are included. Works on any brand mobile HF antenna.
